

EASTERN BLUEBIRD HOUSE

Eastern Bluebirds are among the most popular song birds found in the Eastern United States. Ideal bluebird habitat is composed of mixed hardwood forest and open grasslands or meadows. Nest box should be placed 4 - 6 feet above ground on a post or pole. House should not be placed closer than 100 yards from another Bluebird house. Entrance hole should be **oval shaped 1 3/8" wide X 2 1/4" tall**, located 2" from the top. Clean out box after chicks have left and a second brood may be raised the same year.

Install hinges so top will open for cleaning.

Note: Top of front piece and back of roof piece should be cut at a 30 degree angle.
